

Unit: 1

1. What is Data migration in cloud computing? Suggest the various issues in cloud computing. And discuss the migration process.
2. Explain the strategies and process of cloud migration.
3. Why security is important cloud computing? Explain the Security issues in Cloud Computing.
4. Explain the privacy challenges in cloud computing? Which legislation and regulation have been implemented for privacy concern?
5. What is quality of service (QoS)? How does it work?
6. Write a short note on Identity Management and access control.

Unit: 2

1. What is data warehouse? Explain component of data warehouse.
2. Explain in detail the architecture of Data warehouse.
3. Write a short note on cloud native file system.
4. Explain different model for high performances processing on large data set.
5. Short note on storage types.
6. What is cloud storage for what purpose we are using cloud storage.
7. Compare different cloud database services.
8. Short note on: Amazon Neptune.
Amazon DynamoDB
Amazon aurora

Unit: 3

1. What is the primary use case of VPNs in AWS.
2. How does encryption protect data in transit and data at rest in AWS.
3. What is IAM in AWS? How does it help manage access to resources. And why it is important for securing AWS environment.
4. What is AWS Identity and Access Management (IAM)? Explain its components.
5. What is Multi-Factor Authentication (MFA) in IAM? How does it enhance security?
6. How does AWS Virtual Private Cloud (VPC) enhance network security in cloud computing?
7. List and explain any five AWS security services and their purpose.
8. Explain the use of AWS CloudTrail in maintaining security and compliance and What is Amazon Guard Duty? How does it help in threat detection?
9. What are IAM policies? Explain the difference between managed and inline policies.

Unit 4

1. Explain different backup strategies for AWS databases with examples.
2. Describe the process of creating and restoring snapshots in AWS.
3. Explain automated backups in Amazon RDS with suitable diagram.
4. Discuss disaster recovery planning and execution in AWS cloud.

5. Explain best practices for ensuring data durability and availability in AWS.
6. Compare Backup, Restore, and Disaster Recovery mechanisms in AWS.
7. Explain the role of Multi-AZ deployment in disaster recovery.
8. Discuss AWS services used for backup and disaster recovery.
9. Explain cross-region backup and replication in AWS.
10. Write a note on AWS database security and backup management.

Unit 5

1. Explain the architecture and working of Amazon EC2 with suitable example.
2. Discuss the need and benefits of Amazon EC2 Auto Scaling.
3. Explain the features and advantages of Amazon Lightsail.
4. Describe the process of deploying web applications using AWS Elastic Beanstalk.
5. Explain the working of AWS Lambda with example applications.
6. Compare EC2, Lightsail, and Lambda services.
7. Explain different use cases of AWS cloud compute services.
8. Discuss the role of load balancing and Auto Scaling in cloud computing.
9. Explain serverless architecture and its benefits.
10. Write a note on cloud-based web application hosting using AWS services.
